## COMPANY PROFILE

MEDIA CONCEPTS, a post-production facility based in Burbank, specializes in multilanguage dubbing and English localization. From script re-writing, video editing, dialogue recording, sound effects, music composition, multi-format surround mix to DVD 5.1 re-mastering, the MC team of dedicated professionals utilizes the latest technology to provide the highest standard of post-production services. Clients include DreamWorks, Miramax, Turner, MGM, Warner, Sony Classic, Disney, Universal, Geneon, as well as numerous independents.

With experience worldwide in supervision and execution of multilanguage dubbing, our artistic and technical expertise proudly reflects a unique understanding of international requirements and standards.

## HISTORY

MEDIA CONCEPTS has performed audio, video and multimedia services since 1987 and has provided post-production services for feature film and TV companies, including MGM and Turner Classic Movies for whom they created over 350 music and effects tracks. MC has produced numerous film scores and music tracks for international pop artists in association with The KBS Orchestra (Korea) and the Bangkok Symphony Orchestra (Thailand).

From 1994 to 1998, Media Concepts consisted of 3 studios located in North Hollywood (USA), Bangkok (Thailand) and Cairo (Egypt). Media Concepts Thailand opened in 1995 and dubbed over 1,000 animated TV shows in Thai for the Turner Cartoon Network and Warner Home Video. In 1997, Media Concepts, supported by Disney, established a new studio in Cairo, Egypt. The company dubbed over 300 TV shows in the Arabic language for the newly launched Disney Channel in the Middle East.

1998 was the beginning of a new era as Media Concepts expanded its range of services. The company established a unique English localization base for the US market in Hollywood, re-marketing foreign films and TV series for American and international audiences. MC continues to supervise the foreign versions of blockbuster films.

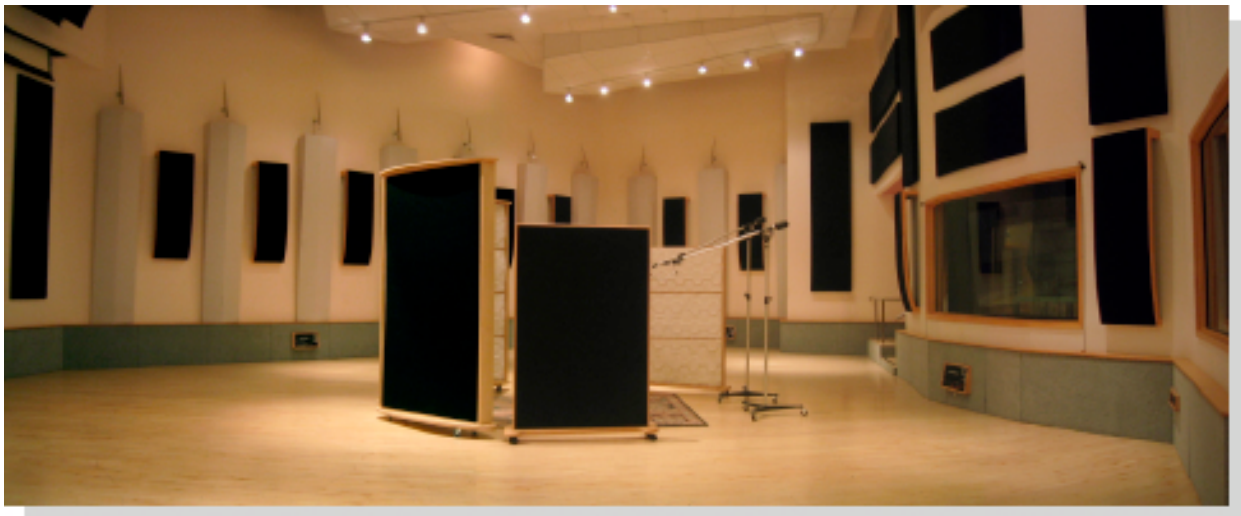

In 2004, Media Concepts purchased The Enterprise II, a recording facility, formerly Barbra Streisand's Evergreen Studios.

## DIGITAL ASSET MANAGEMENT

MEDIA CONCEPTS has created “The Dubbing Suite,” a unique management software that bridges the gap between studio and client, offering direct and centralized information access that is crucial to any dubbing organization worldwide.

The main features include the interaction of “The Dubbing Suite” with the MC multi-language website, allowing international clientele to access project information such as casting selection, voice over talent database, media vault, scheduling, etc., entirely via the Internet.

MEDIA CONCEPTS is supported with the new audio/video X-san Apple fiber channel network, capable of providing centralized information to 12 audio workstations. All video files, digitized from AVID, are now simultaneously read from any client’s station.

## GLOBAL MEDIA TRANSFER DIGITAL DISTRIBUTION NETWORK

Global Media Transfer has been created to distribute your production assets around the world swiftly and securely, while managing it all from your desktop computer. GMT was formed to offer a complete and efficient solution to multi-language projects, presenting the best quality at the most competitive price and in the most innovative way.

The translation and recording are performed in territory, ensuring the best voice over talent and Directors each country can offer, and without any third party involvement.

The unique and strong capabilities of GMT is its proprietary centralized server, security strategy and studio set up, permitting immediate access of recorded data from any studio worldwide to any client server worldwide; a final recording performed in Europe can be accessed and previewed in LA close to real time.

The highly secured audio and video digital distribution is supported by The GMT Management Suite, which permits the administrative, technical, and artistic management with full control of all project elements, including the transmission process. The multi-language centralized voice tests, sync to picture, are now immediately accessible on a web browser via a secure path. Now the quality control of multilanguage projects can be centralized for ADR and final mixreview.
